

PROJECTNURTURE

Providing care and support to pregnant women with substance use disorders

Project Nurture is a new type of care for pregnant women who have been using alcohol, street drugs, marijuana, or prescription pain pills.

All of our sites offer:

- Pregnancy care with a midwife or doctor
- Addiction treatment with a licensed counselor
- Advocacy and community resource support
- Peer support from other women, peer mentors and/or doulas

We can support you with parenting issues.

We can counsel you on all your options for treatment and parenting.

We provide a safe, trusting environment with women who are in similar situations.
